## COWSHED FLOODWASH SYSTEM

With the increasing demand on farmers time and the need to comply with Regional council requirements, Strata Precision Plastics have been producing PVC Cowshed flood wash systems since 1996.

Designed to be easy to install and use, the Strata flood wash is available in a range of sizes. The Strata flood wash is able to be supplied complete with all the components required to install the system. Strata can assist with the manifold, bends, valves and flange sets. The flood wash manifold is normally made from 315mm PVC pipe (this is determined by the customer) with 100mm up-stands spaced normally every metre. Strata have manufactured flood wash systems up to 500mm.

To ensure a flood wash works effectively, the concrete pad that the flood wash is getting laid into must be laid at an optimum grade to ensure that all liquid runs off into the stone sump before heading to the effluent holding ponds. Liquid from the secondary ponds can also be pumped into the concrete holding tank for reuse in the wash down process.
